

5.0L 3V MOD MOTOR

OEM QUALITY SHORT BLOCKS

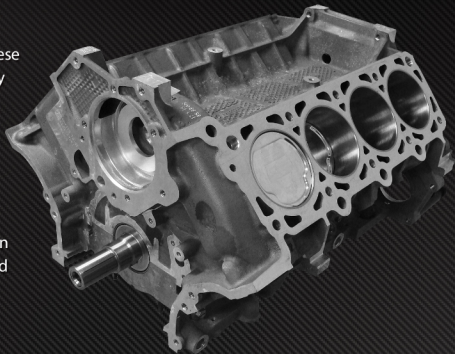

In the world of aftermarket high performance engines many have tried to match the quality, reliability, and durability of the factory OEM engine manufacturers with little success. Even some of the best engine shops have found that the 3V engine can not be built like modular engines of the past. At Brenspeer we have seen our share of expensive "one-off" street and race motor failures. Unfortunately most of the "one-off" aftermarket engines come with little or no warranty and the customer is left to find another "one-off" engine at their own expense!

Until Now!

Brenspeer now offers OEM Quality 4.6L Stroker Short blocks! These exceptional 302 cubic inch short blocks are available for naturally aspirated or supercharged applications. Based on the 4.6L 3V Ford aluminum block the entire internal package is upgraded with premium Brenspeer engineered components that were designed specifically for an OEM quality high horsepower application. Each engine is measured and prepped with the highest quality certified instruments, hand assembled by a professional Brenspeer engine builder in our state of the art clean room, and packed with care to survive shipment across the united states. We are so confident in our B302 engine when installed by Brenspeer we back it with an installation warranty! Unlike many other aftermarket engines all Brenspeer engines are new and no core deposit is required!
